

ECONOMY BARN

This building is true to its name. Well built, but very economically priced. A good barn for lightweight stuff like small garden tools and lawn equipment.

GARDEN SHED

The Garden Shed is built stronger than the economy barn and also has taller side walls. That gives you more space to hang garden tools on its walls or even build a work bench in it.

LOFTED BARN

A popular building that comes standard with a loft and shelves. You can store anything from stuff in boxes and bags to your lawn mower and ATV. Available in gable or side-lofted models.

METAL UTILITY

This basic building comes with a price tag that will fit anybody's budget.

Add a 7' lean-to roof to your metal building or lofted barn

METAL GARAGE

Are you looking for a deal? Check out this basic metal garage. Its got 8' sidewalls, heavy duty floor, a garage door and will handle almost anything you can put in it.

DELUXE METAL GARAGE

Is our basic metal garage too plain for you? The Deluxe Metal Garage comes standard with 8" overhangs, wainscott and entry door, which adds a lot of value and character to it.

GARAGE

Similar to our metal garage, but built more like a house, with studs and rafters 16" on center and plywood sheathing on walls and rafters. Prehung entry door and heavy duty floor is standard.

2 CAR PORTABLE GARAGE

This big building with 2 garage doors can be moved in 2 sections. It comes standard with the same features as the deluxe metal garage and is strong enough to hold your pick-up truck or lightweight tractor.

CLEAR SPAN PORTABLE GARAGE

Our Clear Span Garage comes in 2 sections too, but has no walls in the middle. It has only 1 garage door, which can be put anywhere in the front gable. 8" overhangs and 1 prehung entry door are standard.

CABIN

This building has the right name. Its open porch, tall sidewalls and full size entry door makes it feel like you just stepped into home.

ALPINE HIDEOUT

The Alpine Hideout has a steeper roof than the cabin, which makes it the right building for a loft (but with only 6'5" sidewalls). A great building for a playhouse.

GAMBREL

Very similar to the Alpine Hideout, but has a different roof design, which is also great for a loft. Double doors can be easily added if you want to use it as a storage building.

MOUNTAINEER

Do you prefer a porch on the side of your building? This is the one for you! The Mountaineer can be built in many different sizes and configurations to best suit your need.

***Do you want more than just a plain storage building?
Consider one of these unique designs.***

SALT BOX

With its big overhang in front, just add flower boxes to your windows and you are all set!

A FRAME DORMER

With its special roof design, the A Frame Dormer will compliment any backyard.

SHED DORMER

With its extra windows in the roof, the Shed Dormer lets light in and adds value to it.

DELUXE DORMER SHED

The Deluxe Dormer Shed has a 4' porch built into it and can be used as a playhouse, storage building or both. Double doors are optional.

CHICKEN COOPS

Our one-of-a-kind Chicken Coops are loaded with valuable features... man door, chicken door, nest box on side, vent door, two windows, roost bars and built-in feeder. Add a chicken run and you are all set.

*4 x 6 holds approximately 10 chickens
6 x 8 holds approximately 20 chickens*

2 STORY GAMBREL OR GARAGE

Check it out! A full 2 story building. This Creekside special is built with a folding roof and actual stairs. The perfect structure with which to use your imagination: Man Cave, Hunting Cabin, Guest House or just LOTS of storage!

BEACH HUT

Would you like to have a gazebo, but thought you couldn't afford one? We've got just what you are looking for! More space for less money.

Free Delivery & Placement

We will deliver your shed to your address (within 50 Miles) and place it on a prepared spot in your backyard FREE OF CHARGE...

We do need a clear path that is a little wider than your building to access your level spot. Any tree trimming or fence removal will be an additional cost to you.

Our buildings come with treated runners, so they can sit right on the ground IF your spot is level.

If your spot isn't perfectly level (which is often the case) we recommend that you have a rock pad installed. The rock will keep the building off the ground and if it is leveled out properly (with a laser level or by a professional) the building will sit level too.

We also offer a service called Pro-blocking. It will basically do the same thing as the rock pad, but will cost less and be less hassle for you as a customer. We will place blocks under every runner and also in the middle of your building if it is longer than 8 feet. We supply the blocks.

Pro-blocking will enhance and extend the life of your shed by making it almost perfectly level while keeping wood from contact with the ground. Pro-blocking is not recommended for sheds that are more than 14' wide or 28' long. Buildings that come in 2 sections definitely need a level rock pad.
